

NEXT-GEN POINT-OF-CARE

# INGENUITY

ORCHESTRATED BY CDW

Reduce readmissions. Enhance patient satisfaction. Improve communication. Ensure compliance. Today's healthcare organizations are pressured to accomplish all this – and more.

To meet these demands, many organizations are turning to next-generation mobile point-of-care solutions (PoC). From ensuring the accuracy of lab orders and discharge instructions, to creating seamless EHR integration and more secure care team communication, the right IT tools put patients at the center of every interaction.

## Considerations for a bedside tablet rollout

Tablets are an especially convenient point-of-care technology with a positive impact for both clinicians and patients. But you may need more than one or two to be effective. To determine if a sitewide tablet rollout makes sense, ask the following:

- Are patients asking for access to their medical data during their stay?
- Do clinicians need a simpler, more intuitive way to update patient charts and share data with patients?
- Are patients craving access to entertainment (Facebook, Netflix®) and communication apps (email, IM) that they use at home daily?
- What do current HCAHPS scores look like? Would a tablet investment help increase patient satisfaction?

Find out more about how modern PoC solutions can transform care across the enterprise. **Read the white paper now.**

## THE SOLUTION

CDW's comprehensive approach to next-gen point of care ensures organizations have the robust support infrastructure necessary – including devices, network, applications and software – to transform the timeliness, accuracy, connectedness and quality of patient care. We can orchestrate a solution that encompasses a wide range of technology, including:

**WI-FI ASSESSMENT.** Does your current Wi-Fi have the bandwidth to support enterprisewide connectivity and the volume of devices accessing the network? Can you ensure clear calling for clinicians anywhere in the organization without dropped calls? Is your Wi-Fi integrated into smart devices used at the point of care? To help make sure you can answer YES to these questions and more, our experts will conduct a thorough assessment of your existing network to identify gaps.

**MOBILE DEVICES.** We help you create a modern point-of-care solution that leverages the latest tablets, smartphones, notebooks and related accessories to streamline care and support seamless productivity at the patient bedside or at any point along the care continuum.

**VoIP AND PBX SYSTEMS.** While Private Branch Exchange (PBX) and Voice over Internet Protocol (VoIP) allow for more privacy and flexibility within the organization and support a better mobile experience for physicians, they may require more network resources. We can help you determine the ideal configuration to ensure reliability, bandwidth and network to ensure seamless communication across the healthcare enterprise.

**WI-FI NETWORK.** Mobile point-of-care technology depends on a robust wireless network. We work with you to ensure the right switches, routers and security protocols are chosen to best support Wi-Fi calls on mobile devices vs. Ethernet connections.

**MOBILE BCMA (BARCODE MEDICATION ADMINISTRATION) SOFTWARE.** Working with our software partners, we offer solutions that include mobile scanning and barcoding applications to help ensure efficiency, accuracy and EHR integration anywhere care is given.

**SECURE MESSAGING SOFTWARE.** Secure texting and clinical messaging applications are the cornerstone of a next-gen point-of-care infrastructure. We work with industry-leading partners to bring you the right secure messaging applications to improve communications between physicians, patients and support staff.

**MDM.** Device and data security is critical to healthcare organizations. Mobile Device Management (MDM) is the foundation for securely deploying, provisioning and configuring devices at the IT level. CDW can help you employ a comprehensive MDM platform to support your PoC infrastructure.

## ORCHESTRATING THE SOLUTION

We're a trusted partner to leading healthcare IT providers, so we understand the unique challenges and technology requirements that challenge this industry. Our deep level of expertise means we can orchestrate a next-gen point-of-care solution specifically geared toward your IT needs.
